AL Submitted (13-OCT-1998) Laboratory of Genetics, University of Wisconsin, 445 Henry Mall, Madison, WI 53706, USA.

This sequence was determined by the E. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Project and NCHGR). The entire sequence was independently determined by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently frames were determined using Genemark Software, kindly supplied by 3032 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Correlating it with other data. Comments to the authors are ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are Genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically undated; this is verein MSA No.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of labels while the court of the court o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            names
